Valve stem seals provide a defined metering rate of oil to the valve stem interface of internal combustion engines to lubricate the valve guide and minimize engine emissions. They are available for diesel and gasoline engines with and without boosting. In addition to conventional valve stem seals, our offer also includes valve stem seals for engines with high pressures in the manifolds, e.g. because of turbo chargers or for exhaust brakes on commercial engines.

While the valves have guides or sleeves to keep combustion gases from passing through them, the seals on the top of the valves keep oil in the valve cover from being sucked down into the engine. Seals, typically made of high-strength rubber, fit over the top of the valve stem inside a small collar.
